

Artificial Intelligence Fundamentals

Issued by IBM SkillsBuild

Learning | Intermediate | Hours | Free

This credential earner demonstrates knowledge of artificial intelligence (AI) concepts, such as natural language processing, computer vision, machine learning, deep learning, chatbots, and neural networks; AI ethics; and the applications of AI. The individual has a conceptual understanding of how to run an AI model using IBM Watson Studio. The earner is aware of the job outlook in fields that use AI and is familiar with the skills required for success in various roles in the domain.

Occupations

AI Research Scientists
Collaborate with platform engineers, business subject matter experts, and technology delivery teams to deliver strategic cognitive computing research projects from design to execution.

Learn More

Machine Learning Engineers
Create artificial intelligence products. Develop machine learning models and retraining systems using knowledge of statistics, programming, data science, and software engineering.

Learn More

AI Engineers
Develop deep learning and computer vision applications for autonomous devices. Develop applications for AI devices using existing AI platforms. Understand the interplay of hardware and software architectures on future algorithms and applications to develop AI platforms.

Learn More

Machine Learning Researchers
Conceive, research, and prototype new machine learning and high-performance computing techniques. Develop relevant software and hardware technologies with the goal of converting them into products. May
